OAuth flow - step 1 of 3: entry point

Shootboard's YouTube connection page (https://shootboard.app/youtube.html) before any channel is connected. The user starts here and presses "Google ile devam et" ("Continue with Google"). The interface language is Turkish.

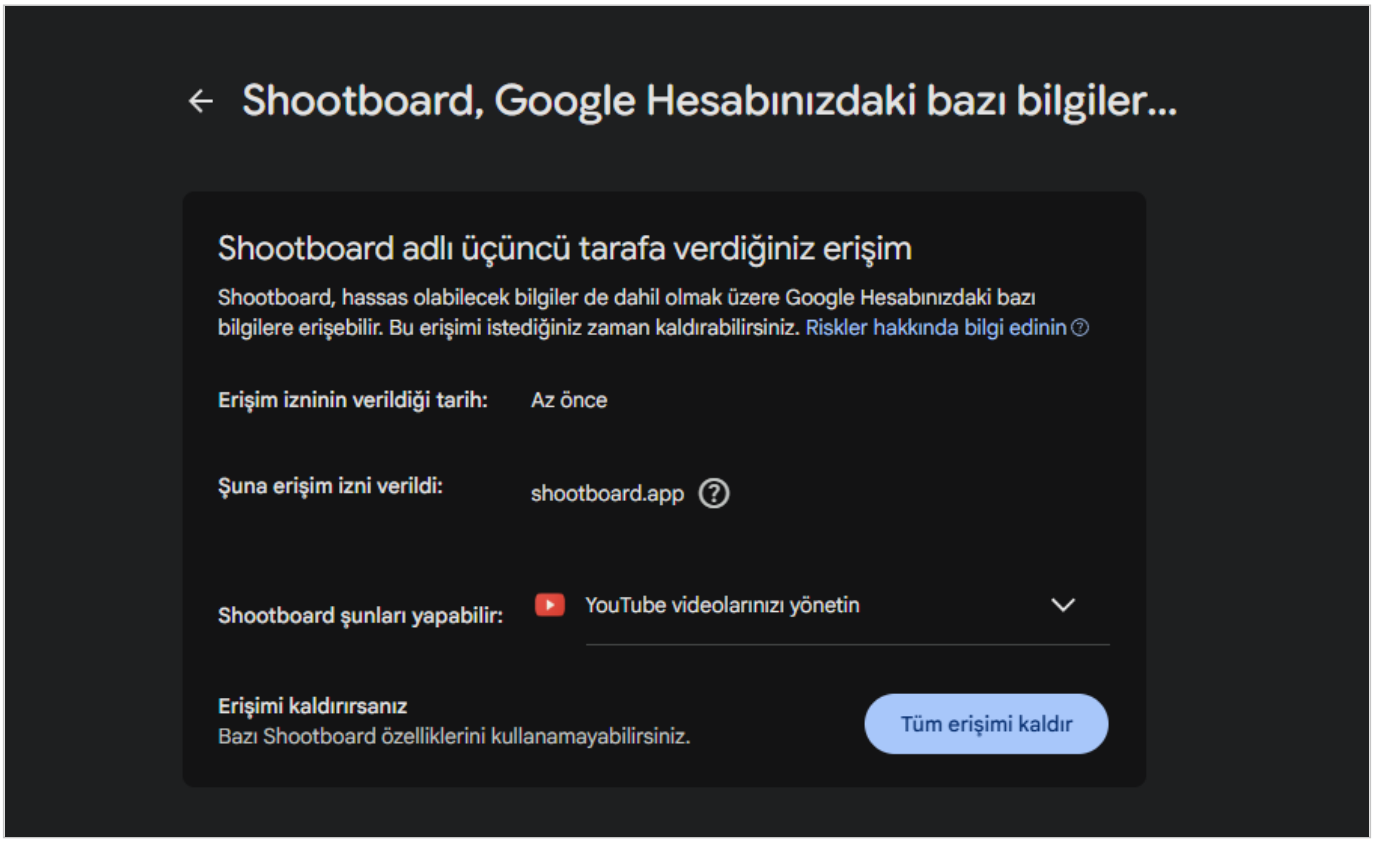

OAuth flow - step 2 of 3: consent screen

Google's consent screen for shootboard.app. The app is not yet verified, so Google shows its unverified-app notice and the user continues deliberately. The account shown is the channel owner's own Google account.

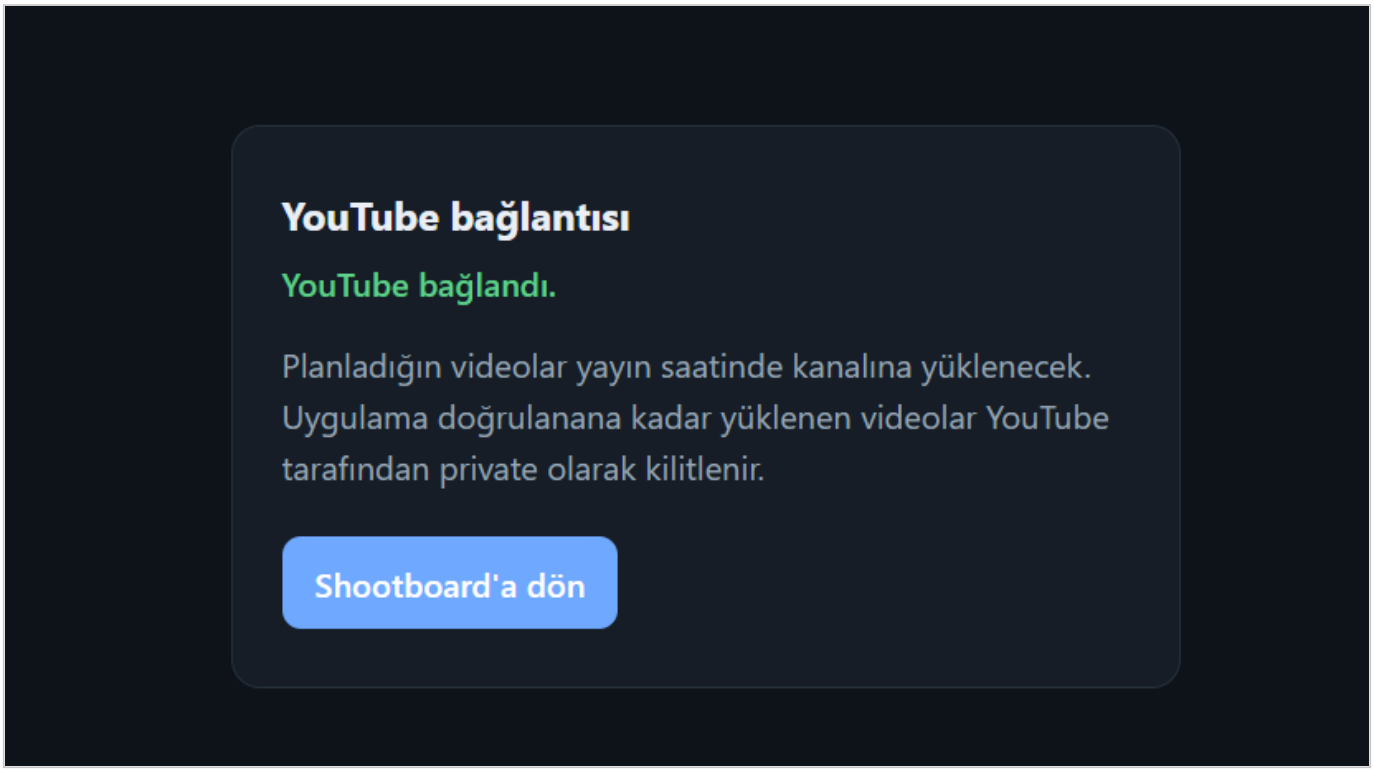

OAuth flow - step 3 of 3: granted scope and revocation

The grant as it appears in the user's own Google Account (Security > Third-party apps > Shootboard). "Shootboard sunlari yapabilir" means "Shootboard can do the following", and the single line under it reads "Manage your YouTube videos" - the youtube.upload scope, which is the only scope we request. The button on the right, "Tum erisimi kaldir", is "Remove all access": the user can revoke at any time from Google's own settings.

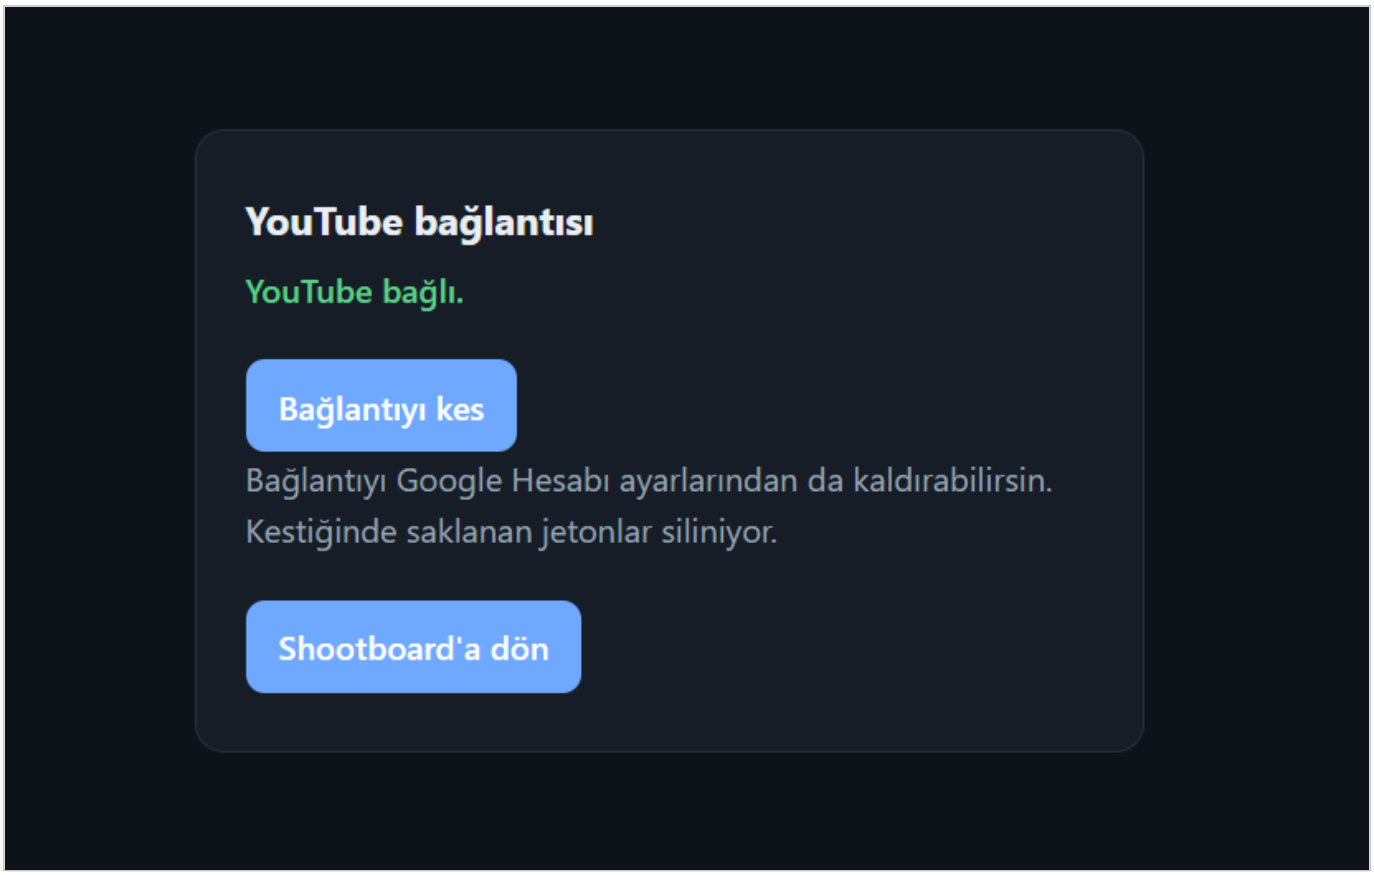

Connected state

Shootboard after the channel is connected. The text states plainly that scheduled videos will be uploaded to the owner's channel at the planned time, and that until the app is audited YouTube locks uploaded videos to private. This audit request exists to lift that lock.

Revocation inside the application

The same page also offers revocation inside Shootboard itself: "Baglantiyi kes" means "Disconnect". The note below it says the connection can also be removed from Google Account settings, and that the stored tokens are deleted when disconnected.

Upload interface

The upload interface: a Short planned in the content calendar. The owner ticks "Publish automatically"; Shootboard then uploads this file through videos.insert and YouTube publishes it at the time shown. Title and description come from this entry. Nothing is uploaded unless the owner scheduled it here.
